Abstract (en)
[origin: EP2284332A2] The system (1) has a clamping element (5) for clamping a shield (23), where the clamping element is positioned at a distance to underground at frame units (9.1-9.4). A suspension device (13) suspends the shield above the clamping element, where the shield is fastened in the area of the clamping element at an edge side. The clamping element is partially covered by the shield at an upper side and is circular shaped or polygonal shaped. The suspension device is arranged at the clamping element at a foot side.
