Abstract (en)

[origin: EP2284335A2] The assembly has two bearing-rosette units (5, 6) assigned at two sides, recessed in a recess (7) and connected with each other by connecting elements (12, 23, 24). The bearing-rosette units are in contact with an outer surface of a window- or door element (1). A flange (15) is formed by a diaphragm (14) and held on a base part (10) by a sleeve part (22) i.e. guide sleeve. The flange is screwed by utilizing an external thread (21) or internal thread (20) with a corresponding mating-thread of the base part. The sleeve part includes an outwardly projecting edge. An independent claim is also included for a rosette arrangement for covering a key hole or lock cylinder as a part of a handle set for a lock that is recessed in a window- or door element.
