Abstract (en)

Fuel rail device (60) of a combustion engine (22), wherein the fuel rail device (60) comprises a fuel rail (18), a union (34), a pipe (24) and a sealing ring (38). The union (34) has a longitudinal axis (L1), is fixedly coupled to the fuel rail (18) and is in hydraulic communication with the fuel rail (18). The pipe (24) is partially engaged by the union (34) and is designed to be in hydraulic communication with a fuel injector (20). The sealing ring (38) is arranged coaxially to the pipe (24) and is arranged radially between the union (34) and the pipe (24) and is designed to sealingly couple the union (34) to the pipe (24).
