Abstract (en)  
[origin: EP2284953A1] The electrical installation device has a housing, a printed circuit board (3) fastened in the housing and a connection component for the connection of connecting conductors. The connection component has a partial component, which is fastened to the printed circuit board and another partial component, which is fastened to the former partial component. The latter partial component is fastened to a part of the housing is fastened in order to hold the printed circuit board in the housing. An independent claim is also included for a method for mounting an electrical installation device.
