Abstract (en)

[origin: WO2009135338A1] A powered device having an ON-OFF mechanism comprising a housing having a mounting surface, a trigger associated with said mounting surface and having an OFF position, an ON-UNLOCKED position, and an ON-LOCKED position, and means for biasing the trigger into the OFF position from the ON-UNLOCKED position, wherein said trigger comprises a first pressing surface for manual movement of the trigger from the OFF position against said biasing means to the ON-UNLOCKED position, and a second pressing surface for manual movement of the trigger from the ON-UNLOCKED position to the ON-LOCKED position, and wherein the first pressing surface and the second pressing surface are generally adjacent to each other and form a reflex angle.
