Abstract (en)

[origin: WO2009144016A1] The invention relates to a printing press comprising multiple inking units (5), which cooperate with at least one counter-pressure cylinder (2), wherein each inking unit (5) comprises a printing roller (8) and at least one other inking transfer roller (9), each of them having a roller body (39) on the front faces of which are disposed on the end side a first and a second shaft journal (41, 42), at least one roller bearing device (30), in which the printing rollers and the ink transfer rollers can be supported in roller bearing positions (31, 32), and with transfer means (20 to 27) by means of which at least printing rollers (8) or ink transfer rollers (9) can be transported between the roller bearing positions and the inking units. At least one roller bearing position (32), in which one of the mentioned rollers (8, 9) can be fitted for carrying out a subsequent printing order, is provided in the roller bearing device (30).
