Abstract (en)

[origin: WO2009150358A1] The invention relates to a solid material containing an active load and enabling easy access to said load. The material comprises a matrix made of a microporous workable material with open pores, and a particular active load having at least a portion thereof contained in a free state in at least a portion of the pores of said matrix. The invention also relates to a method for making such a material.
