Abstract (en)

[origin: WO2009149985A1] The invention relates to a hydrogel that is a copolymer of a polymerizable monomer mixture which contains a) 10-65 mole percent of at least one hydrophobic vinyl monomer of formula (I), where R₁ represents hydrogen or methyl, p is an integer ranging from 1 to 8, and in which the hydroxy groups are provided in a protected form, b) 25-70 mole percent of at least one (meth)acrylate, vinyl carbonate, or vinyl carbamate monomer containing silicone, c) 0-25 mole percent of at least one hydrophilic vinyl monomer, and d) 0-10 mole percent of at least one cross-linking agent relative to the total amount of monomers a) to c). The hydroxy groups of the segments formed by monomers a) are provided in a protected or free form in the hydrogel. Said hydrogel can be used for producing contact lenses or intraocular lenses.
