Abstract (en)

[origin: WO2009133040A1] In a device (6) for power generation, having a first electrode (1) and a second electrode (2), a partition layer (3), which comprises at least one zwitterion compound and/or one radical compound, is disposed between the two electrodes (1, 2). After the two electrodes (1, 2) and the partition layer (3) are brought together, an external voltage is applied between the two electrodes (1, 2) for a specific period of time.
