Abstract (en)
 [origin: WO2009136795A1] The present invention is related to a method and system for authenticating sessions between mobile clients and a server in a network, wherein the server provides a plurality of services, wherein respective services requires different levels of access security for any session to be activated between a respective mobile client requesting a session for a specific service and the server, wherein the access to the requested service will be limited if the mobile client has a capability of providing access security lower than required by the session to be activated.
