Abstract (en)

[origin: EP2287080A2] The device has labeling machines (1, 2) formed as rotary-table-type machines, and infeed star wheels (61, 62) and discharge star wheels (81, 82) attached such that a container transport path (7) is formed. A container to be labeled is fed to the labeling machines in a controlled manner over the container transport path. Different types of labels are processed with each of the labeling machines. A controller (15) controls the infeed star wheels such that the container for attachment of labels is fed to the labeling machines. An independent claim is also included for a method for labeling containers with different types of labels.
