Abstract (en)  
[origin: EP2287103A1] A car-door locking device for an elevator includes: a car switch fixed to a door hanger; a car fixed latch fixed to any one of the car and a bracket fixed to the car; a car arm fixed to the one-side opening type door of the car through an intermediation of a first car shaft, the car arm being pressed against a landing vane fixed to a one-side opening type landing-door to turn on the first car shaft when the one-side opening type door of the car is opened; and a car movable latch fixed to a door hanger through an intermediation of a second car shaft, the car movable latch de-energizing the car switch to inhibit an operation of the car and being released from the car fixed latch based on turning of the car movable latch on the second car shaft caused by the turning of the car arm.
