Abstract (en)
[origin: EP2287552A1] The exchanger has a block including a set of tubular elements i.e. flat tubes, that leads to a tubular end in a manifold and stays in fluid connection with a collecting container (100). The collecting container includes an extruded profile element (9) and an extruded collecting container tube (5) that are connected to each other by a soldered joint carried out through a cylindrical element (19), which is arranged in an end section (11) of the extruded profile element.
