Abstract (en)
[origin: EP2288180A2] The hearing aid e.g. BTE hearing aid has an identifier for distinguishing hearing aid usage at a correct side on left or right ear of a wearer. The identifier is constructed as rotational component having first and second features to be set by rotational movement. The rotational component is preferably set in a cover (5) of a housing (20). The cover is constructed as a battery compartment for inserting a battery.
