Abstract (en)
[origin: WO2009132697A1] The invention relates to an elevator system (A) comprising at least one terminal (9.1, 9.2, 9.3) and at least one call controller (7, 7'). The terminal (9.1, 9.2, 9.3) transmits information on an input floor and a destination floor to the call controller (7, 7') via at least one signal bus (5'). The call controller (7, 7') is disposed on a first plug-in card (1). At least one signal bus adapter (5.1) for the signal bus (5') is disposed on a second plug-in card (2). The first plug-in card (1) and the second plug-in card (2) are directly connected to each other to form a printed circuit board (78).
