Abstract (en)  
[origin: WO2009138078A1] The invention relates to a fixing device for detachably fixing components (11, 12) that can be moved relative to each other, particularly lifting devices, comprising a locking mechanism (1) that can be mounted on a first component (11), at least one locking unit (2) (2), a detent element (3) that can be mounted on a second component and comprises a plurality of substantially identically configured detents (4), wherein the locking element (2) can be positively or non-positively engaged with at least one detent (4) in a detachable manner, and a force element (5) for producing a relative movement between the locking element (2) and at least one detent (4), wherein the detents (4) have different distances from each other at least in a partial region (103) of the detent element (3).
