Abstract (en)

[origin: WO2009137254A2] The invention relates to modified Factor IX polypeptides such as Factor IX polypeptides with one or more introduced glycosylation sites. The modified Factor IX polypeptides may exhibit increased in vitro or in vivo stability such as a longer plasma half-life. The invention also relates to methods of making modified Factor IX polypeptides, and methods of using modified Factor IX polypeptides, for example, to treat patients afflicted with hemophilia B.
