Abstract (en)
[origin: WO2009094690A1] An intelligent location system for automatically determining and recording a recordable event by automatically determining a combination of the following criteria: a. position analysis of the user; b. correlation of position analysis of the user with one of the one or more predetermined defined client or facility locations; c. time analysis of position of the user at the one of the one or more of the predetermined defined client or facility locations; and wherein only when all the above three criteria are correlated does a recordable event occur and is recorded.
