Abstract (en)

[origin: WO2010012515A1] The invention relates to a motor vehicle conductor connection element 2 comprising a first flat section 4 and an inlay 6 that is disposed in the flat section in such a manner so as to be substantially flush with a surface of the flat section. In order to guarantee contacting with different conductors, it is proposed that the flat section 4 be essentially entirely coated with a metal 12 and that the inlay 6 be partially coated with the metal 12.
