Abstract (en)  
[origin: EP2290180A2] The lock has a coupling enclosed by an adjusting unit (18) for producing a form fit connection of latch removal element (12) with box halves (4, 5). The coupling has control parts (17, 25) connected with the removal element in a form fit manner. The control parts are projected to produce a form fit connection in a movement region of the box halves. The control parts comprise stop units (16, 19) that are spatially separated from each other, and are pivotable between two pivotable positions. The stop units project in to a movement region of the two box halves in the pivotable positions.
