Abstract (en)

A connector comprising contact elements, wire-mounting members and a short-circuit element. The contact elements, the wire-mounting members and the short-circuit element can be arranged in at least a short-circuit position and a connected position relative to each other. In the short-circuit position the short-circuit element electrically connects two or more contact elements with each other, and a wire entering the connector is not electrically connected to a wire-mounting member. In the connected position the short-circuit element does not electrically connect any two of the contact elements with each other, said wire entering the connector is securely mechanically and electrically connected to a wire-mounting member, and said wire-mounting member is electrically connected to one of the two or more contact elements which the short-circuit element connects with each other in the short-circuit position of the connector.
