Abstract (en)

[origin: WO2009149479A1] Apparatus (7) for releasably coupling a drawer (2) to a rail (5), which can be pulled out in a longitudinal direction, of a drawer pull-out guide (3), having a holding part (9) which interacts with a mating holding part (13) in the coupled state in order to establish the releasable connection, wherein at least that region (12) of the holding part (9) which comes into contact with the mating holding part (13) is made flexible, preferably by attaching a flexible piece of material, so that any longitudinal play of the drawer (2) which may occur in relation to the rail (5) can be compensated.
