Abstract (en)
[origin: WO2009149573A1] A suction teat (4) for connecting to a housing unit (2, 3) of a drink container (1), comprises a base body (40) and a mouth piece (42) connectable to the base body (40) and tapering relative to the base body (40), having at least one suction opening (43). The suction teat (4) comprises a first connector element (46) for connecting to the housing unit (2, 3) and a second connector element (41) for connecting to the housing unit (2, 3) and a suction duct (48). The suction duct (48) runs in the mouth piece (42) and opens with a first end in the suction opening (43) and with a second end (46) facing the base body (40). Said second end (46) forms the first connector element for the sealed connection to the housing unit (2, 3). The base body (40) is designed to be unfolded towards the suction opening (43) of the mouth piece (42). Said suction teat may be simply and hygienically connected to the feeding bottle and easily cleaned.
