Abstract (en)
[origin: WO2009143863A1] A housing antenna arrangement (1; 2) is proposed with which automatic mass production of basic electrical or electronic devices with such a housing antenna arrangement (1; 2) can be carried out in a way that reduces costs and saves time. This is achieved in that the housing antenna arrangement (1; 2) is based on a pressure-contact-forming process between the metallic antenna housing (3) and the associated electronic circuit (4) in order to operate the antenna housing (3) as a housing antenna using sprung elements (7).
