Abstract (en)
[origin: EP2292132A2] The dishwasher (1) has a sequencing controller (19) in which a washing program to control a wash cycle for cleaning dishes is stored. A washing chamber (2) receives the dishes during the wash cycle. A water feed device (5) includes hot water inlets (6, 7) for receiving hot water from an external hot water supply (WH) and cold water inlets (8, 9) for receiving cold water from an external cold water supply (KH). The washing program comprises program steps to wash the dishes using the hot and cold water from the hot and cold water supplies, respectively. An independent claim is also included for a method for controlling a wash cycle for cleaning dishes.
