Abstract (en)

[origin: EP2292832A2] The integration of a single machine (10) for the operations of dedusting, washing and centrifuging carpets is the solution to current problems, which require a washing machine and another for centrifuging, shaking being carried out manually. This is avoided with the design of the machine described, which integrates a frame, formed by side members (11,12) joined by longitudinal cross beams (35), a carpet shaking station (44) with the aim of dislodging the small particles of dirt in the carpet, a carpet washing station (13) with the corresponding brushes cleaners and means to supply liquids such as water and detergents, and subsequent collection, and a centrifuge station (46) for the carpet when clean.
