Abstract (en)

[origin: EP2292861A2] The window (1) has a fastening device for fastening a cover plate (4) to a frame piece (3). A receiving pocket receives a plug-in element and a rest upstream element cooperating with a snap arm and/or rest upstream element and elastically connected transverse along insertion direction during insertion of the plug-in element and receiving pocket. Rest rear grippers self-handedly engaged with insertion end position snap arm and rest upstream element that are relative to each other. A closing part (20) is retained on the cover plate using a rest connection (14). An independent claim is also included for a method for fastening a cover plate to a frame piece of a casting frame of a dwell roof window.
