Abstract (en)

[origin: EP2292866A1] The device (1) has a tubular discharge pipe (5) discharging smoke through an opening (A) that is arranged in a roof (T). A sealing unit is utilized to seal the opening on circumference of the discharge pipe. The sealing unit comprises a base (2). A rectangular plate (10) is provided with another opening (3) that is extended toward a top part by a rising of a tubular base (4). The discharge pipe comprises a support unit (8) that is equipped on the base and a regulation unit (9) to regulate an inclination of an axis (5') with respect to an axis (4') of rising of the base. The base is made of folded and welded metal sheet.
