Abstract (en)
[origin: EP2292990A2] The icemaker has an installation frame (15), and an ice bowl (1) that is pivotably retained in the installation frame by two bearings between a freezing position and a dispensing position. One of the bearings exhibits a bearing body (20) that is removable from the installation frame and from the ice bowl in a same direction that is parallel to a rotation axis of the ice bowl. The bearing body is locked at the installation frame and the ice bowl. An opening (53) is formed in a front wall (18) of the installation frame.
