Abstract (en)  
[origin: WO2009138366A1] The inventing relates to a food slicer, comprising a driven cutting blade, a support for items to be sliced, a height-adjusting device for the support, which adjusts a vertical position of the items to be sliced relative to the cutting blade, and a slide that is mobile relative to the cutting blade, the support being arranged on said slide. A supporting device for items to be sliced comprises at least one supporting element which supports the items to be sliced during slicing on a supporting surface. The supporting device for items to be sliced is coupled to the height-adjusting device, the position of the effective supporting surface being defined by the vertical position of the support.
