Abstract (en)

[origin: WO2009132386A1] A dangerous goods repository checking system comprises a user identifier device for identifying a user accessing a repository, arranged to output user data indicative of an identity of said user; a dangerous goods identifier device for identifying dangerous goods checked into or out of the repository, arranged to output goods data indicative of an identity of said dangerous goods; and a data storage configured to receive and record the user data and the goods data when the identified user checks the dangerous goods into or out of the repository.
