Abstract (en)

[origin: EP2295326A1] The apparatus (20) has a labelling device (22) applying a label from a strip of labels to a plastics-material container (2) i.e. bottle, and a storage device (60) storing the labels. A control device (24) controls labelling of the container on a basis of detection results of detection devices. The control device interrupts the labelling of the container if one of the detection devices detects a pre-determined pattern of the container and container-absence points and/or if the other detection device detects a pre-determined filling state of the labels. Independent claims are also included for the following: (1) a plant for treatment of containers comprising a stretch blow-molding apparatus (2) a labelling process for labelling containers by a labelling apparatus.
