Abstract (en)
[origin: EP2295332A2] The container (1a) has a circulating side wall (3), and an opening provided opposite to a base (2), where the container is made of plastic e.g. polyethylene and polypropylene. Circulating bar-shaped upper and lower flanged rims (5a, 5b) are formed in an area of the base and an area of the opening. The rims project outwards over the wall. A circular profiled frame is attached at the wall in the area of the opening. A bracket (9) is attached at the frame by film hinges and made of plastic. A lid (4) closes the opening and has a side edge that is connected with an inner edge of the frame.
