Abstract (en)

[origin: EP2295336A1] The device has a distribution head (2) welded on a body (10) of a container (1), where the body comprises a layer made of a mixture of polypropylene and polyethylene e.g. low density linear polyethylene. The distribution head comprises a base plate (20) provided with a distribution opening (200) and a flap (21) that is movable between a closing position and a releasing position of the opening. The distribution head is made of polypropylene by injection molding, and the base plate comprises a reinforcement unit provided with curved profile ribs.
