Abstract (en)

[origin: EP2295635A2] The rail support system (12) has rails (11) that are arranged with distance in transverse direction (Q), and has a base body (14) that is arranged within the rails. Multiple covering bodies (16) are fixed on the base body and are arranged on an upper side (20) of the base body. A receiving space (19) is formed for one of the rails between the covering bodies that are adjacent in the transverse direction in a direct manner. An independent claim is also included for a method for manufacturing a track section with rails.
