Abstract (en)

[origin: EP2295639A2] The system has a tubular case (3) whose peripheral wall (5) defines an internal cavity (10) and longitudinal end (7) is closed by a base (12) of the case, where the case is molded by a synthetic material. A separation peripheral zone (13) is located on top of a base (10a) of the cavity. A lag screw is supported against the base of the case to separate parts (3a, 3b) of the case, where the screw is separated from one of the parts of the case. The screw is extended beyond a lower side of an anchoring block e.g. lining, with one of the parts of the case.
