Abstract (en)  
[origin: EP2295646A1] The device (10) has an adjustable sleeve-shaped receiving part (20) arranged at an upper end of a casing tube (5), onto which a supporting frame of a drilling apparatus (100) is fastened. The receiving part is adjustably supported between a drilling position in which the drilling apparatus is located at the receiving part on a same axis with respect to the casing tube, and an offset position in which the receiving part is laterally offset with respect to the casing tube. An adjusting unit comprises a carriage that is guided along a displacement path. An independent claim is also included for a drilling method for producing a drill-hole inside a casing tube.
