Abstract (en)
[origin: EP2295664A1] The device (10) has a longitudinal rod fixed in a ceiling wall, and a connection end (14) engaged in an interior space of a U-shape section (32) e.g. rail. The connection end is provided with two lateral support spans (22, 24) returning with respect to the rod. The lateral support spans have return spigots (30) that are respectively engaged in opposite edges for prohibiting relative movement of the U-shape section and the connection end. The lateral support spans are extended between a proximal part and a distal part.
