Abstract (en)

[origin: EP2295694A2] The element (6) has a support section (12) provided for a window sill (8) and a projection (15), where the projection extends over length of the element. A side of the projection lies adjacent to a sill connector (9) in a mounting position when viewed in a horizontal position. Another side of the projection serves as a stop for another window sill (10). A retaining groove (14) is provided adjacent to the projection. The connector is designed in form of a plastic strip with hollow chambers and is adhered at the projection, where an upper side of the section is designed as an inclined surface. An independent claim is also included for a window frame and soffit brickwork assembly comprising an insulating element.
