Abstract (en)
[origin: EP2295701A2] The door has a winding roller provided for a door foil (2) and arranged transversely above a door opening. A thickened edge portion (5) is provided at edges of the foil, where the edges of the door foil run in a locking direction. The edge portion is supported at a vertical guide (6a) in a transverse direction (31) of the door foil and comprises two flat outer surfaces (5b, 5c), where the outer surfaces run parallel to a main plane (40) of the door foil. The edge portion or a surface of the portion in the outer surfaces and/or a shoulder surface (5a) is made from Teflon(RTM: PTFE).
