Abstract (en)
[origin: EP2295903A2] The carrier has a stabling surface comprising strips (3) that are attached at two opposite sides. The stabling surface is designed as a glass plate (1). A hand rail extends to one of edges and is designed as a wire bracket (10), whose anchoring pins are anchored in the strips in a form-fit manner. The strips comprise a metallic strand press profile (4) and a plastic body (5) that partially fills the profile. A resting projection unit is provided at the plastic body and engaged in a borehole. The profile faces a recess that is opened upwards and downwards. An independent claim is also included for a refrigeration device that is utilized in a supporting cam.
