Abstract (en)
The present invention relates to a contacting device (100) for an electronic card (130) comprising a housing (150) with a first and second detent means (153) and a cover (110) comprising at least one cover latch means (111). The cover latch means (111) is adapted to be engaged with a first detent means (152) for holding the electronic card (130) against contact elements (140) with a first predefined normal force and with a second detent means (153) for holding the electronic card (130) against contact elements (140) with a second predefined normal force.
