Abstract (en)

[origin: WO2009135515A1] The invention relates to a positioning cylinder (1) for a surgical drill, which positioning cylinder is screwed into a drilling jig by means of an external thread (4), especially for drilling in a jawbone for a dental implant. The positioning cylinder comprises a cylinder base (2) having an axial internal bore (3) and an external thread (4) for screwing it into the drilling jig. The positioning cylinder (1) is designed as a one-piece or integral part and the internal bore (3) is used to guide the drill. The invention further relates to a system consisting of said positioning cylinders (1) and surgical drills.
