Abstract (en)
[origin: GB2460849A] A medication temporary storage and transporting carrier comprises a tray 30 with a hinged and closable lid 31, preferably made as one piece from moulded plastics. The tray 30 defines a number of side-by-side apertures 32 adapted to receive individual sealed containers 17 of liquid or solid medication. Each container 17 is formed with a flange 18 which rests upon the tray 30 when a container is received with an aperture 32. The containers 17 are retained within the tray by the lid 31 when closed. Each container 17 may be individually removed from the tray 30 whereupon its contents may be dispensed after removal of its individual sealed film 23. The carrier provides a convenient means of transporting small numbers of medication containers 17 as may be required during short periods.
