Abstract (en)

[origin: WO2009144012A1] The invention relates to a printing press (1) with at least one counter-pressure cylinder (2) which has a first and a second front side (AS, BS) and to which are allocated at least two inking units (6a... 6j), each of which have a pressure cylinder (15a... 15j), wherein the pressure cylinders can be advanced to the counter-pressure cylinders and be driven by respectively one drive (22a.... 22j). A first inking unit is associated with the first half of the counter-pressure cylinder and a second inking unit is associated with the second half thereof. The drive (22a... 22d) of the pressure cylinder of the one first inking unit, which is disposed in the first half, is arranged on the first front side of the counter-pressure cylinder. The drive (22f... 22j) of the pressure cylinder of the one second inking unit, which is disposed in the second half, is arranged on the second front side of the counter-pressure cylinder.
