Abstract (en)
[origin: WO2010005300A1] Belt conveyor (1), particularly for a helical conveyor, comprising a conveyor belt extending along a conveyance path, comprising a series of elongated support members or links (4) for supporting goods to be conveyed, which links extend transverse to the belt, and a series of connecting rods (20) for connecting the links one to the other, wherein a number of first links each comprise a drive body (131) of a magnetic material, and a drive mechanism (100) comprising one or more magnets placed along the conveyor belt for generating a magnetic field for exerting a driving force on one or more of the drive bodies near the magnets, and wherein the drive mechanism is placed in a bend.
