Abstract (en)

[origin: EP2138442A1] The elevator has an elevator cabin with a horizontally movable cabin door leaf (2), a horizontally movable shaft door leaf, a cabin door lock (40) with a cabin door bolt and a bolt stop, and a coupling device (20) connected to the cabin door leaf. The movement of the cabin door bolt is fixedly coupled with the movement of the entraining element (21). The cabin door bolt blocks an opening movement of the bolt stop and the cabin door leaf, if the entraining element is defined in a passage position spaced from the counter element (30). An independent claim is included for a method for operating a cabin door bolt of a cabin door locking mechanism of an elevator.
