Abstract (en)

[origin: GB2459468A] A system for pivotally mounting a radiator 10 on a wall 1 such that the radiator 10 may be swung away from the wall at its top to facilitate cleaning and the like comprises an upper bracket 40 releasably holding an upper portion of the radiator adjacent the wall 1, at least one adjustable lower bracket 20 fastened to the wall and supporting a lower portion of the radiator 10 to enable the radiator 10 to pivot on the lower bracket 20 and swing away from the wall 1 at the top of the radiator 10 when released. Lower bracket 20 comprises an adjustment mechanism having a wall mounting part (24, fig 2) with a hook (22) pivotally mounted thereon and a plurality of securing points (26) in the wall mounting (24) so that a projection (28) is securable at a selected one of the securing points (26), and the hook (22) having a camming surface (32) that bears against the projection (28) when the hook (22) is pivoted so that the angle between the hook (22) and the wall mounting part (24) of the lower bracket 20 is adjustable by adjusting the location of the projection (28). The plurality of securing points (26) may be a slot in the wall mounting (24) and the projection (28) may be an adjustable support such as a bolt slidable in the slot (26). The hook (22) may engage with a swivel connector (fig 3) for the radiator 10. A chain 60 limits the distance the upper portion of the radiator 10 may pivot from the wall 1. Upper bracket 40 may have a child proof securing means.
