Abstract (en)
[origin: WO2009156328A2] The invention relates to a refrigerator containing a valve (84), the refrigerant originating from the cooling circuit entering said valve, a tube (80) having an outlet (82) leading towards the cooling circuit, and an evaporator (50) which consists of a plurality of windings on a refrigerating surface. The refrigerator further comprises a tube (80), a primary extension (62) between the valve (84) and the outlet (82) and at least one primary supporting surface (60) that is connected to the primary extension (62) to form an auxiliary cooling element.
