Abstract (en)

[origin: WO2010003752A1] The invention relates to a method and to a device for conveying at least one heat-exchange medium (2,66) which has at least one first fluid (3,4,5), which has a first permittivity, and at least one second fluid (3,4,5), which does not mix with the first fluid (3,4,5) and has a second permittivity which differs from the first permittivity, wherein at least one dielectric interface (16) is formed between the first and second fluids (3,4,5), which dielectric interface (16) is subjected to an electrical thrust field (19) which is excited in a progressing fashion and which exerts a thrust (27") on the at least one dielectric interface (16).
